PART NO. 10.606 — PACKAGES WILL NOT BE SPLIT FOR INDIVIDUAL PARTS.

CARE AND CLEANING

The surface of your Self-Rimming Countertop Sink may be cleaned with a mild soap in warm water using a soft cloth. For stubborn stains use "Soft-Scrub" by Clorox or Lysol "Tub & Tile Cleaner" or a powdered detergent such as "Spic-n-Span." Never use abrasive scouring powder or steel wool pads as they will dull the surface. A periodic coating of a silicone based marine polish will help retain the fine finish.

ROUGH-IN DIMENSIONS

Your Hospitality Sink requires a 15 1/2" x 18 1/2" countertop cutout. Refer to Rough-In for detail dimensions.
NOTE: The centerline of the drain is located 11" from the back edge and 8 1/2" from either side. If you choose, you may use your Hospitality Sink as a template for laying out the countertop cutout. Measure actual part before drilling or cutting countertop.

1. Place Hospitality Sink (1) upside down on countertop in desired location — hold sink in place and scribe a guide line all around the rim with a pencil.

HINT:
If pencil does not mark surface of countertop, you may apply 2" wide masking tape to the approximate area and do the marking directly on the tape surface. Leave tape in place to protect countertop surface during drilling and cutting.

2. Remove Hospitality Sink, measure in 3/4" in each corner; this will be the center point for the 7/8" diameter hole — 4 required. Insert (fine tooth) sabre saw blade into one of the corner holes and cut along "Cutout line." — See "Countertop Cutout Details"
3. The rear ledge of your Hospitality Sink will accept many different faucets; 4” Center Set on center, 4” Center Set either right or left, 8” Center Set on center. Depending on the model faucet you choose, the appropriate holes will have to be drilled. You will notice that there are five indented hole locators molded-in, on the underside of the rear ledge, do not cut out faucet holes until you have measured the actual faucet you intend to use — some single lever faucets require a large center/supply hole and small diameter mounting holes. A 1” diameter, fine tooth hole saw with center drill pilot would normally be used for the majority of faucet hole drilling. Drill from underside of rear ledge to mark center, turn upright to finish cutting with hole saw.

4. Install “Basket” Style Drain Assembly per manufacturer’s instructions. The Hospitality Sink is furnished with a 3 1/2” diameter drain hole.

5. Install Mounting Studs (2) in each corner lug — CAUTION — DO NOT OVERTIGHTEN!! A standard 5/16” socket or wrench is required. Screw stud in place until nut makes contact with bottom of lug — continue 1/4 turn, maximum. Repeat this operation for each mounting lug. — See “TYPICAL STUD INSTALLATION”

6. Apply a bead of clear siliconized sealant* (not furnished) all around the underside of the rim in the molded-in groove — See Detail Drawing. Place Hospitality Sink into the countertop cutout, secure from the underside with hardware provided. You will need a 7/16” socket or wrench to secure Mounting Nuts (4) in place. Wipe away any excess sealant that squeezes out during tightening. — See “CAULKING / SEALANT DETAIL”

7. Complete water supply and proper sanitary waste trap connections as specified by local code requirements.

*Siliconized Sealant such as: CELULON™ Plumbing & HVAC Adhesive Sealant by Red Devil®

CAULKING/SEALANT

HELPFUL HINT

HINT:

APPLY A DAB OF SILICONIZED SEALANT TO THREADS TO LUBRICATE STUD AND EASE INSTALLATION.

TYPICAL STUD INSTALLATION

APPLY A BEAD OF SILICONIZED SEALANT* APPROXIMATELY 3/8” DIA. — THIS AREA, AROUND UNDERSIDE OF RIM.

CAULKING/SEALANT

HELPFUL HINT
