### Optional Anti-Jumps

Antijumps are sold separately.
1. Measure the base opening along center of shower curb as shown in figure 1, then trim Sill (A) to 3/16” less than measurement obtained.

2. Slide Vinyl Seal (J) into the Sill’s receiver as shown in figure 2. Run the Vinyl the full length of the Sill, then trim any excess.

3. To insure proper operation, Track Guide (I) must be centered on Sill (A) when installed. Located center of Sill. Apply small dab of caulking to underside of Track Guide, then snap Track Guide onto Sill as shown in figure 3.

4. Turn the Sill over and apply a bead of caulking the full length of the caulking grooves, see figure 2. With high lip toward exterior of enclosure, position Sill at center of shower curb. Temporarily tape Sill to shower curb to prevent movement.

5. Place Wall Jambs (B) on to ends of Sill (A) and up against shower walls as shown in figure 4. Plumb the Jambs, then pencil mark their installation holes locations on the shower walls (3 per jamb). Remove Wall Jambs. Using a 3/16” masonry bit, drill 1” deep installation holes in locations previously marked. Insert Plastic Screw Anchors (H) into holes.

6. Reposition Wall Jambs (B) as before. Using the top and bottom installation holes only . . . secure Jambs to walls using two(2) 834Q Installation Screws (G). Do not secure Jambs at center at this time.

7. Measure the wall to wall opening at top of Wall Jambs and cut the Header (C) to 1/16” less than the measurement obtained. If model purchased comes with Anti - Jumps (K) . . . insert Anti - Jumps (K) into the Header’s Anti - Jump receiver. Position and install the Header over the Wall Jambs.

8. Using Bracket Screws (d2), loosely assemble the two piece Hanger Bracket Assemblies (d1). Do not install rollers at this time. Position brackets over glass edges as shown in exploded view - sheet 1 and figure 5 on this sheet. Position the Hanger Brackets an inch from vertical edge of glass as shown and tighten down on the screws (allen wrench required). Next install the rollers as shown and tighten down on screw.

9. Install the Towel Bar (M) on the outside panel as shown in the exploded view - sheet 1 (note that the Towel Bar is on the same side as the Nylon Rollers). Begin by wrapping Vinyl (P) over glass edge as shown in figure 7. Use a block of wood or a rubber mallet to tap Towel Bar Brackets (L) over Vinyl (P) until seated. Position Towel Bar (M) as shown and secure with four(4) 638 Screws (N).

10. Install the outside Glass Panel (D) by lifting the Panel up and into the Header (B). Lower the Panel into the Track Guide (I) and engage the Rollers (d3) with the roller track.

11. Attach Panel Bumpers (F) to Wall Jambs using a 834Q Installation Screw (G). Please note that notches on bumpers are positioned so as to accept glass insertion, see figure 6.

12. Run a bead of clear mildew resistant caulking down the full length of each Wall Jamb outside where the Jambs meet the Walls. Now run a bead outside where the Sill meets the curb. Follow caulking manufacturer’s instructions before using shower (normally 24 hours). Installation is now complete.
